

Supply of Drinking Water in Offices: a Simple Issue?

staying hydrated in the workplace

Did you know ...

Dehydration can have a negative impact

on our performance, alertness and concentration

Some studies have shown the effects of dehydration on decision-making and cognitive performance, which could result in a decline in productivity and also could be associated with an increased risk of work-related accidents

Drinking enough water is essential for good health and is correlated with boosting the immune system, focus, productivity, and warding off energy-depleting dehydration

Dehydration messes with productivity

23% IN A STUDY, SUBJECTS WERE PASSIVELY DEHYDRATED to 1, 2, 3 and 4% of their body weight with specific testing throughout the decline. The study concluded that visual-motor tracking, short-term memory, attention and arithmetic efficiency were all impaired at dehydration levels of 2% of body weight or more. In the extreme, the study also noted a 23% reduction in reaction time when subjects were 4% dehydrated.

DRINKING WATER CAN INCREASE PRODUCTIVITY by 14%. Encouraging employee water consumption with purified water can help keep an office healthy and working efficiently.

FLITERED WATER HAS BECOME A MUST-HAVE in modern life and can be found nearly everywhere. With a widespread preference for fresh, filtered water, employees justifiably expect quality drinking water.

Did you know ... Elkay® has products that provide fresh drinking water and they can be installed in any office space and workplace.
